APPLICANT : NIKON CORP;

INVENTOR : MATSUMOTO TAKESHI;

INT.CL. : G02B 21/18 G01B 9/04

TITLE : MICROSCOPE DEVICE

ABSTRACT : PURPOSE: To improve the operability of sample observation by providing a display device which has a display screen where a predetermined mark is displayed and an optical member which images the mark at the image formation position of a sample by an observation optical system.

CONSTITUTION: An image of the observed sample 1 mounted on a stage 7 is formed at the image formation position 4 through an objective, a beam splitter 10, and an image forming lens 3 which are as wide as a housing 2. The display mark 22 to be displayed on a liquid crystal display device 5(21) is imaged at the image formation position 4 by the optical system which has a projection lens 11, the beam splitter 10 and a coupling lens 3. Through an ocular 6, the image of the observed sample 1 and the image of the display mark 22 on the liquid crystal display device 5 are observed in the same visual field. A control circuit 8 inputs a signal given by a mouse 9 and moves and displays the display mark 22 displayed on the liquid crystal display device 5.
